

TOOTHPASTE - with or without Fluoride?

Fluorine (sodium fluoride).

Fluorine is the element and fluoride is a term that applies to molecules (combinations of atoms like sodium fluoride).

When you hear about fluoride in drinking water, it comes from adding a fluorine compound (usually sodium fluoride) to drinking water.

Fluorine is a residue of the production of aluminium. Fluoride accumulates in the body year after year.

Fluoride is a major repressive intellectual function. In addition to being used in water supplies, toothpastes and mouthwashes, sodium fluoride is a common ingredient in cockroach and rat poisons, psychiatric hypnotics, anaesthetic drugs and in neurotoxic gas .

This is one of the ingredients of Prozac (16.5%).

Independent scientific evidence shows, that fluoride causes various mental disorders and render people stupid, docile and servile, in addition to decreasing the bone durability and damaging the bone structure.

The first use of fluoride was in the Nazi concentration camps, IG Farben, a giant pharmaceutical company who ran camps like Auschwitz added fluoride to drinking water.

This company still exists, it is part of the German company Bayer. "Does anyone think that the Nazis did this because they were concerned about the health of their prisoners teeth?" (quote from ecobio-attitude.org). This mass medication of water fluorine reserves was used to sterilize prisoners and render them stupid to ensure their docility.

Charles Perkins, a chemist, wrote the following to the Foundation for Nutritional Research Lee, Milwaukee (Wisconsin) , October 2, 1954 :

"... In the 30s, Hitler and the Nazis , dreamed of a world dominated and directed by the Nazi philosophy Pan Germanism . Nazi chemists worked out a plan of reaching and controlling the masses. The plan was submitted and adopted by the German General Armies.

It was to take control of the population of any region, through the mass medication of drinking water supplies. By this method they could control the population whole areas.

The medication of water with fluoride also causes sterility in women.

He said that repeated doses of fluorine, in infinitesimal quantities, "reduce the possibility of an individual to resist domination by slowly poisoning by narcosis a specific part of the brain, thus submitting to the will of those who want to govern.

He says that fluoride is a "light and convenient lobotomy " .

Harvard University scientists stated “our results support the possibility of adverse effects of fluoride exposures on children’s neurodevelopment.”

Head of the Cytochemistry Section at the National Cancer Institute Dr. Dean Burk revealed that fluoride exposure led to increased tumour growth – **even at levels as low as 1 ppm** (1 mg per litre). This is the standard for United States drinking water.

Beyond revealing an **accelerated tumour growth rate of 25%** in his research, fluoride was found to produce **melanotic tumours, transform normal cells** into cancer cells and increase the carcinogenesis of other chemicals.

In 1977, Dr. Burk estimated that fluoridation has **actually caused about 10,000 deaths according to his research.**

“A person who drinks water to which was added fluorine for a year or more, will never be the same, mentally or physically.”

The Environmental Protection Agency (EPA) — an agency charged with protecting the people — has classified fluoride as a substance” with substantial evidence of **developmental neurotoxicity.**

Dr. J. William Hirzy, Ph D, stated: "Our members’ review of the body of evidence over the last eleven years, including animal and human epidemiology studies, indicates a causal link between fluoride/fluoridation and cancer, genetic damage, neurological impairment and bone pathology. Of particular concern are recent epidemiology studies linking fluoride exposure **to lowered IQ in children.**"

Children under 3 years should never use fluoride toothpaste or drink fluoridated water.

Regarding the teeth:

The Journal of the American Dental Association, Volume 23, page 568, April, 1936, titled “Fluorine in relation to bone and tooth development” by Floyd De Eds, Phd confirmed **that Fluoride is a general protoplasmic poison,**
and,

The Journal of the American Medical Association, Sept 18, 1943, Editorial. “Fluorides are general protoplasmic poisons”.

Dr. Hardy Limeback (MSc and PhD in Biochemistry), Head of Department of Preventive Dentistry at the University of Toronto and president of the Canadian Association for Dental Research .

"Dentists are absolutely not trained in toxicity, he said. Your well-intentioned dentist is simply trying to follow fifty years of misinformation from public health and dental associations. I also did. Unfortunately, we were wrong. "
