

# Why I Created a Tooth Powder

## Teeth

**Teeth are not simply pieces of enamel. Each tooth is a veritable organ** and has a function.

**Teeth are made of cells, so they *need food* to remain in good health.**

Unlike what most people think, **teeth are porous.**

The dentine contains millions of tubules.

It is through these tiny tubes, that our saliva **nourishes our teeth**. Our saliva contains all the minerals and nutrients they need.

**Eating softens the enamel, so it needs to be re-mineralized.**

## The Mouth

In the mouth there are:

- **32 teeth** with their own independent blood and nerve system.
- **6 major plus 800 to 1000 minor, salivary glands.**
- **9,000 taste buds**, all on the tongue and **highly vascularised.**

**If you put a toxic chemical into your mouth, it may pass into your blood stream and damage your health. Some toxins are highly poisonous.**

### How are teeth nourished?

**INSIDE:** The blood in the pulp nourishes our teeth. *It is the pulp that initiates the formation of dentine.*

**OUTSIDE:** Saliva contains minerals and proteins to build tooth enamel, as well as antibacterial compounds that kill bacteria.

***“The role of saliva in the process of mineralisation of the teeth is a major factor in tooth health”, (Ref, Weston A. Price, Dentist).***

## Why Not a Toothpaste?

Even toothpaste which is free of toxic chemicals may contain glycerine and glycerine leaves a film on the teeth.

*“This film prevents teeth from getting harder and stronger” (Ref Nagel Ramiel).*

*“Glycerine coats the teeth, thus they CANNOT PROPERLY RE-ENAMELIZE”, (Ref Ph.D. Gerard. F. Judd).*

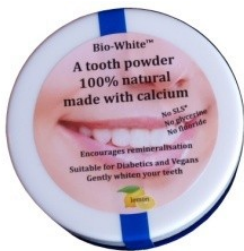

## A TOOTH POWDER

A tooth powder **made with beneficial products (Calcium, Xylitol and Salt)**, helps the saliva to **nourish the teeth**.

Calcium Carbonate provides a gentle cleaning. Calcium is also one of the main components of teeth.

Xylitol **encourages re-mineralisation**.

Grey Sea Salt provides minerals and trace elements.

### BIO-WHITE™ Lemon

Organic Ginger and Organic Lemon essential oil.

Lemon is antiseptic, has excellent digestive properties, stimulates the liver and gently whitens your teeth.

### BIO-WHITE™ Peppermint

Herbs: Thyme, Rosemary, Sage, Chamomile and Peppermint are all organic, plus Organic Peppermint essential oil.

These herbs have a strong antibacterial effect and leave a nice feeling of freshness in your mouth.

These tooth powders do not intend to diagnose, treat or cure any disease. [Foodalivelt@gmail.com](mailto:Foodalivelt@gmail.com)
